Formal Notice: AI System Failures, ADA Violations, and Unresolved Bad Faith Claim — Policy Holder David Lee Wise

4 messages

David Wise <r.giskard.01@gmail.com> Wed, Feb 11, 2026 at 8:01 PM
To: privacyrequest@aoins.com

To Whom It May Concern at Auto-Owners Insurance Company:

My name is David Lee Wise. I am a 100% disabled veteran (GAD 70%, hypertensive heart disease 60%, hypertension 10%, CKD 30%) and a current Auto-Owners policyholder. I require email-only communication as a reasonable accommodation under the Americans with Disabilities Act. This email constitutes formal notice of an unresolved bad faith claim, documented AI system failures, and ADA violations within your customer-facing infrastructure.

I am sending this communication to your aoins.com email address because your published legal@auto-owners.com and claims@auto-owners.com addresses both rejected my previous correspondence. My $30,000 demand letter, sent January 28, 2026 at 1:19 PM, bounced from server 205.207.141.148 with error 4.4.1 after Gmail retried delivery for 45 hours until January 31. The only successful delivery was to my agent, Angie Fitzgerald at North Insurance Group, who confirmed forwarding to your corporate office on January 30, 2026. As of today, February 12, 2026 — 15 days later — I have received zero response from Auto-Owners Insurance.

INCIDENT: JANUARY 28, 2026

At approximately 9:00 AM, my vehicle broke down on Highway 34 near Buffalo, Minnesota. The outside temperature was -3°F. My heater was lost. I have hypertensive heart disease rated at 60% disability — cold exposure with this condition creates documented cardiac event risk.

Timeline of your system's failures:

9:05 AM — First call to roadside assistance disconnected.
9:05-9:10 AM — Reached your AI system. Routed to ResQ.io text portal. No human contact.
9:30-9:57 AM — Second call. After 27 minutes with AI, reached a human agent who suggested I "find my own tow." (57 minutes elapsed.)
9:57-10:05 AM — Ami Towing called ME twice asking for my location. They had received ZERO information from your dispatch system. (65 minutes elapsed.)
11:00 AM — Your system sent me a text message stating "provider on the way, ~2 hours." This was FALSE. Ami Towing still had no location. (120 minutes elapsed.)
11:40 AM — I rescued myself via Wide Street Taxi at a cost of $25. (160 minutes elapsed.)
12:05 PM — Ami Towing finally reached my vehicle. 3 hours and 5 minutes after my first call. (185 minutes elapsed.)

Post-incident: Immediate distress, racing heart, blood pressure spike documented. I have photographic evidence of blood pressure monitoring (hyper vigilant series), complete call logs, text thread screenshots (21 images), GPS maps, and tow arrival photos.

AI SYSTEM TESTING: DOCUMENTED FAILURES

During and after this incident, I encountered and documented four AI systems operating under your brand with zero disclosure to policyholders:

1. HONK Technologies (Los Angeles, CA) — Roadside Dispatch AI
Your roadside assistance is operated by HONK Technologies, a third-party company white-labeled into your mobile app and web portal. Customers see "Auto-Owners roadside" but HONK operates the backend. HONK describes itself as using "AI-driven, cloud-based tools" and claims 75,000+ trucks. On January 28, HONK's AI system:

— Failed to transmit my GPS location to the tow provider
— Dispatched Ami Towing with zero information about where I was
— Generated a false "provider on the way" text message via ResQ.io while the provider had no location
— Provided no emergency escalation protocol for life-threatening cold exposure
— Left no human accountable. Your own customer reviews state you have "no control over the towing service companies."

BBB complaints against HONK Technologies show identical failure patterns: tow trucks dispatched without information, false ETAs, policyholders stranded in freezing temperatures. Your Google Play reviews reference "Honk/Auto Owners" together — customers are discovering this undisclosed relationship on their own.

2. Phone System AI (IVR) — All Customer Lines
Every phone number you publish routes through an AI-powered Interactive Voice Response system: 1-888-869-2642 (roadside), 1-800-288-8740 (billing), 1-888-252-4626 (after-hours), and even your ADA accessibility line at (888) 616-7208 x59327. There is no disclosure that these systems are AI-operated. It took me 30+ minutes to reach a human, and that human had no authority and no additional information beyond what the AI provided. That human told a 100% disabled veteran stranded in -3°F weather to "find your own tow."

3. ResQ.io / Tech Chain Software Corporation — Text Portal AI
The text interface at resq.io/ns/ generated automated status messages under your brand. It sent me the false "provider on the way" message. It offered cancel/confirm buttons but no human escalation path. This third-party system was making decisions about my emergency with no human oversight.

4. Carpe Data / Minerva — Underwriting AI
Publicly announced November 14, 2023: Auto-Owners selected Carpe Data's Minerva platform for "straight-through-processing" underwriting. Minerva maintains 45 million business profiles built by machine learning that scrapes online content, uses online customer reviews for risk scoring, and makes automated underwriting decisions. No individual policyholder is informed that AI systems influence their underwriting. No opt-out mechanism exists.

None of these four AI systems are disclosed to policyholders anywhere on your website, in your app, or in your policy documents.

ADA VIOLATIONS

As a 100% disabled veteran requiring email-only communication:
— Your published legal@ and claims@ email addresses reject all inbound connections
— Your primary contact method is a phone system that requires 30+ minutes to reach a human
— Your ADA accommodation line is itself a phone number
— Your Customer Center portal requires login to access emergency roadside, claims tracking, or agent contact information
— Your mobile app has documented crashes, login failures, and errors that prevent disabled users from accessing services
— No email-based claims process exists
— No pre-login emergency access exists

I am formally requesting email-only accommodation for all communications regarding my policy and this claim, as required under the ADA.

COMMUNICATION FAILURES

Your email infrastructure operates across two domains: auto-owners.com and aoins.com. The auto-owners.com domain publishes email addresses (legal@, claims@) that its own mail server at 205.207.141.148 refuses to accept mail on. Your aoins.com domain hosts functional addresses for privacy, accessibility, and technical support, but these are not prominently published for policyholder use.

Your agent, Angie Fitzgerald at North Insurance Group, confirmed she forwarded my demand to your corporate office on January 30, 2026. Your Agency Terms of Use explicitly state agents are independent contractors with no settlement authority. This means the only person who successfully received my correspondence has no power to resolve it, and the corporate office that does have authority has been silent for 15 days.

WHAT I AM REQUESTING

1. Acknowledgment of this communication within 5 business days
2. Email-only accommodation for all future correspondence (ADA)
3. Resolution of my $30,000 demand for the January 28, 2026 incident
4. Written disclosure of all AI systems that processed my roadside request, including HONK Technologies, ResQ.io, and any other automated systems involved
5. Explanation of why your mail server at 205.207.141.148 rejected my demand letter for 45 hours
6. Contact information for a human with settlement authority who can communicate via email

If I do not receive a response within 10 business days, I will file formal complaints with the Minnesota Department of Commerce Insurance Division, the Better Business Bureau (Lansing, MI), and pursue additional remedies as appropriate.

All evidence is preserved and timestamped. All communications are documented.

Respectfully,

David Lee Wise
100% Disabled Veteran
Auto-Owners Policyholder
